

EYE DROP RISK DISCLAIMER

THERE ARE POSSIBLE ADVERSE REACTIONS OF EYE MEDICATIONS

Other possible adverse reactions may occur which are not recognized.

If you have any adverse drug reactions, stop taking the medication and call us immediately.

OCULAR

(Involving the eye)

1. Glare and light sensitivity
2. Stinging, burning
3. Inflammation of the cornea (front of the eye)
4. Sloughing (removal) of large areas of tissue on the cornea
5. Iritis (inflammation of the brown area within the eyeball)
6. Hemorrhage of the conjunctiva (thin tissue covering the eyeball)
7. Blurred Vision
8. Redness, itching
9. Pain in or around the eye
10. Cataract (cloudiness of the lens in the eye)
11. Retinal detachment (when the internal lining of the eyeball comes off)
12. Loss of all vision- Blindness
13. Glaucoma (high pressure in the eye which may lead to blindness)
14. Excessive tearing in the eye
15. Decreased night vision
16. Corneal decomposition/scarring
17. Allergic reactions
18. Deposits in the conjunctiva (lining of the outside of the eye) and cornea (front part of the eye)
19. Diplopia (double vision)
20. Ptosis (lid droop)
21. Corneal Degeneration/melt (when the front part of the eye begins to degenerate due to infection or inflammation)
22. Punctal occlusion - closing drain resulting in excessive tearing
23. Adhesions between the lens, cornea, and iris which may lead to blindness
24. Infection/Inflammation/hemorrhage/scarring of the eyeball, eyelids, conjunctiva (thin skin lining of the eyeball)

SYSTEMIC

(Involving the entire body)

- 1) Insomnia
- 2) Depression, loss of appetite
- 3) Rash, fever
- 4) Stevens Johnson's Syndrome, Toxic epidermal necrolysis (extensive peeling away from the skin with severe inflammation over the entire body)
- 5) Shortness of breath, difficulty breathing
- 6) Asthma
- 7) Systemic infection (infection involving the entire body)
- 8) Slowing or quickening of the heart rate, arrhythmia (abnormal heart rate)
- 9) Congestive Heart Failure (when fluid builds up in the lungs causing shortness of breath due to the heart not functioning well)
- 10) Dizziness, drowsiness, headaches
- 11) Hair Loss
- 12) Stomach pains
- 13) Nausea, vomiting, diarrhea
- 14) Hypertension (high blood pressure), hypotension (low blood pressure)
- 15) Hyperglycemia (high blood sugar), Hypoglycemia (low blood sugar)
- 16) Allergic reactions
- 17) Syncope (loss of consciousness and can't be awoken)
- 18) Hives, skin rash
- 19) Bone marrow suppression - stopping reproduction of all cells in the body such as red blood cells (aplastic anemia) which provides oxygen to the body, white blood cells (neutropenia) which fights infection in the body, platelets (thrombocytopenia) responsible for stopping bleeding (clotting process)
- 20) Kidney stones, irreversible damage to kidney, liver, brain, lungs
- 21) Delayed wound healing
- 22) Numbness and tingling in the arms and/or legs
- 23) Stroke
- 24) Shock
- 25) Muscle weakness, fatigue
- 26) Cough (nasal congestion)
- 27) Worsening gout
- 28) Death
- 29) Bleeding in the stomach, intestine and/or bladder
- 30) Demineralization of bones possibly leading to brittle bones and/or fractures
- 31) Other possible risks not mentioned

This form covers medicines used both in clinic and at home. This form covers this visit and any subsequent visits.

I have reviewed the material on this document and all of my questions have been addressed to the best of my satisfaction.
